- Supercell thunderstorms have the potential to produce all severe weather hazards, including tornadoes
  - The primary concerns are very large, damaging hail up to softball sized and flash flooding

---

- Lower confidence coverage of severe thunderstorms.
- Moderate confidence in timing of severe thunderstorms.

Primary Severe Timing Details

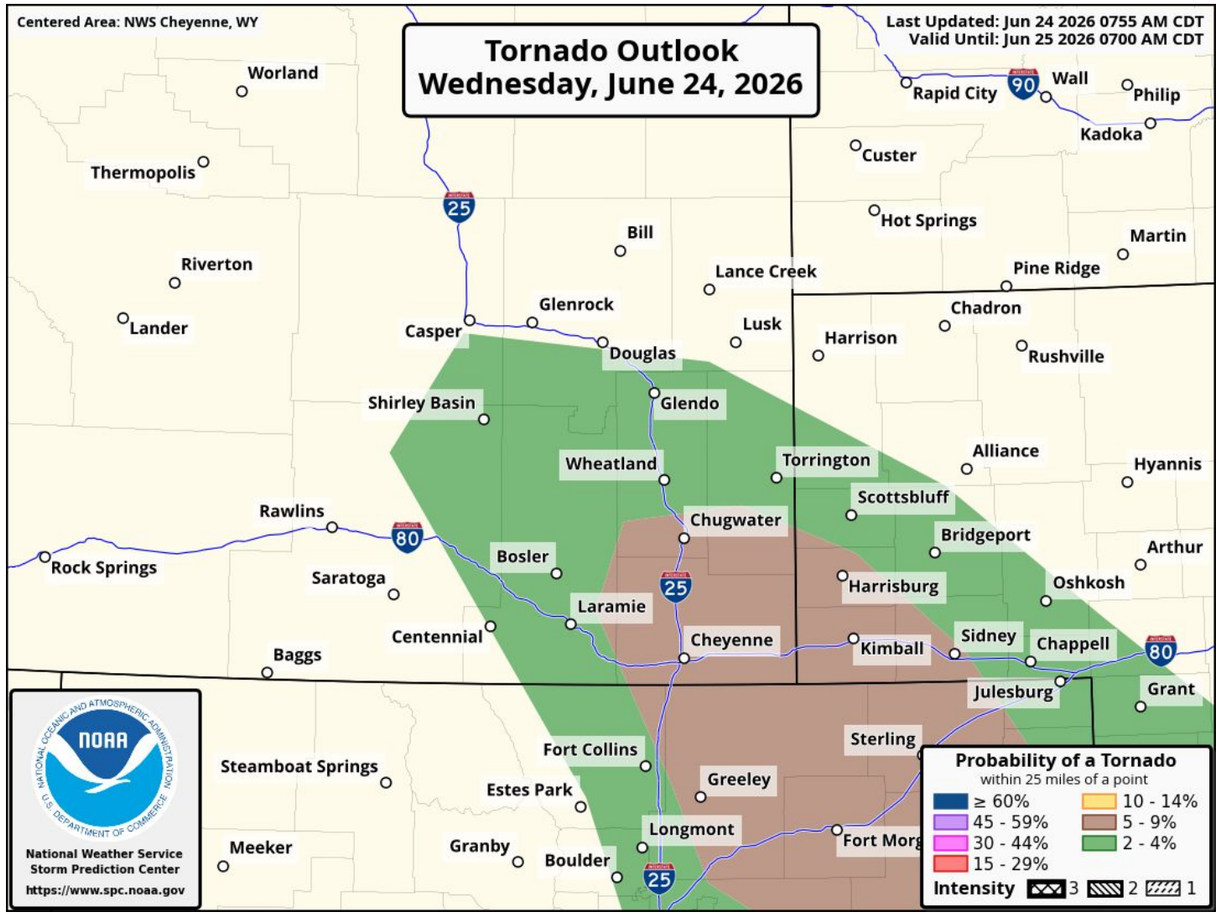

Wyoming: 4 PM until 11PM
Nebraska: 6 PM until Midnight

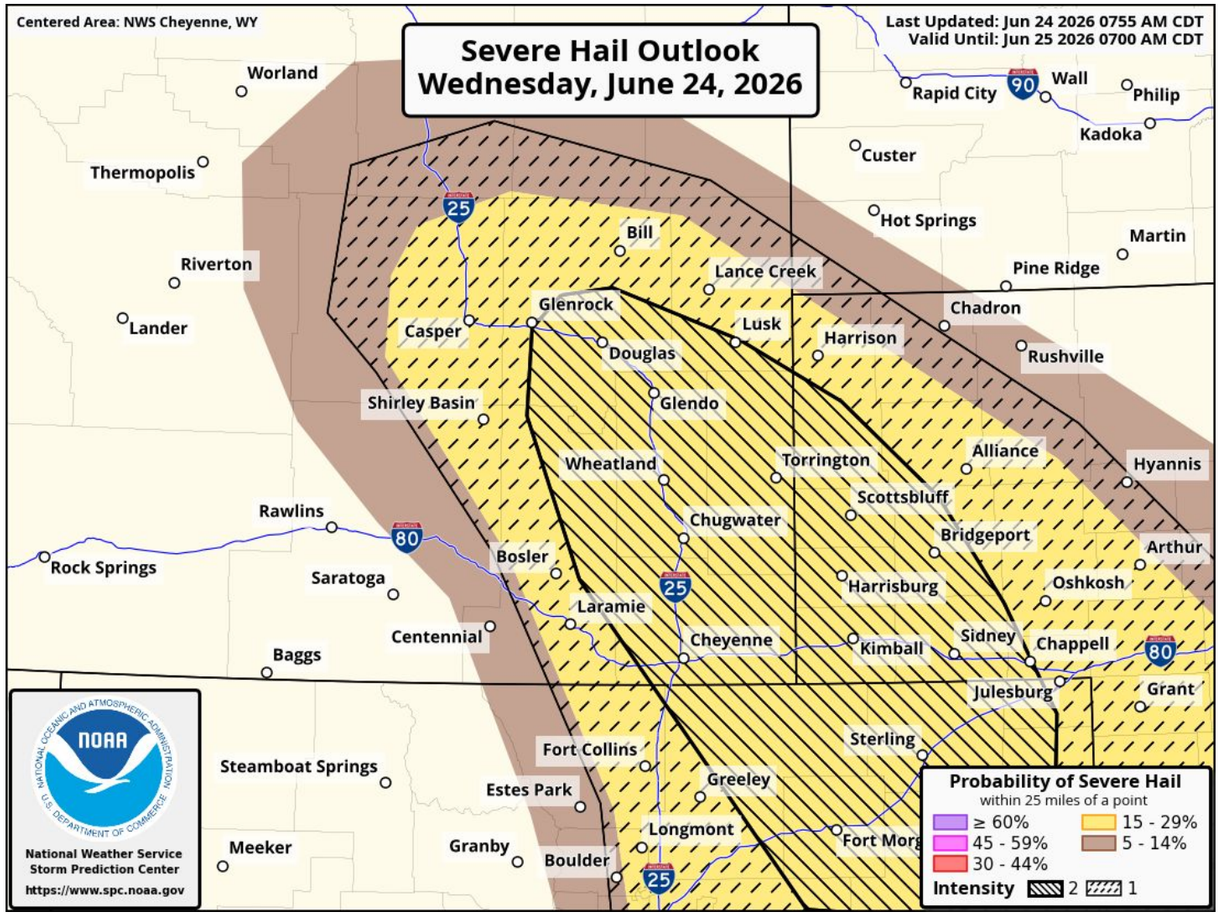

Tornado & Large Hail Risk

June 24, 2026
8:41 AM

This Afternoon and Evening

➔ A few tornadoes are possible today, with the highest probabilities in far Southeastern Wyoming and the southern Nebraska panhandle

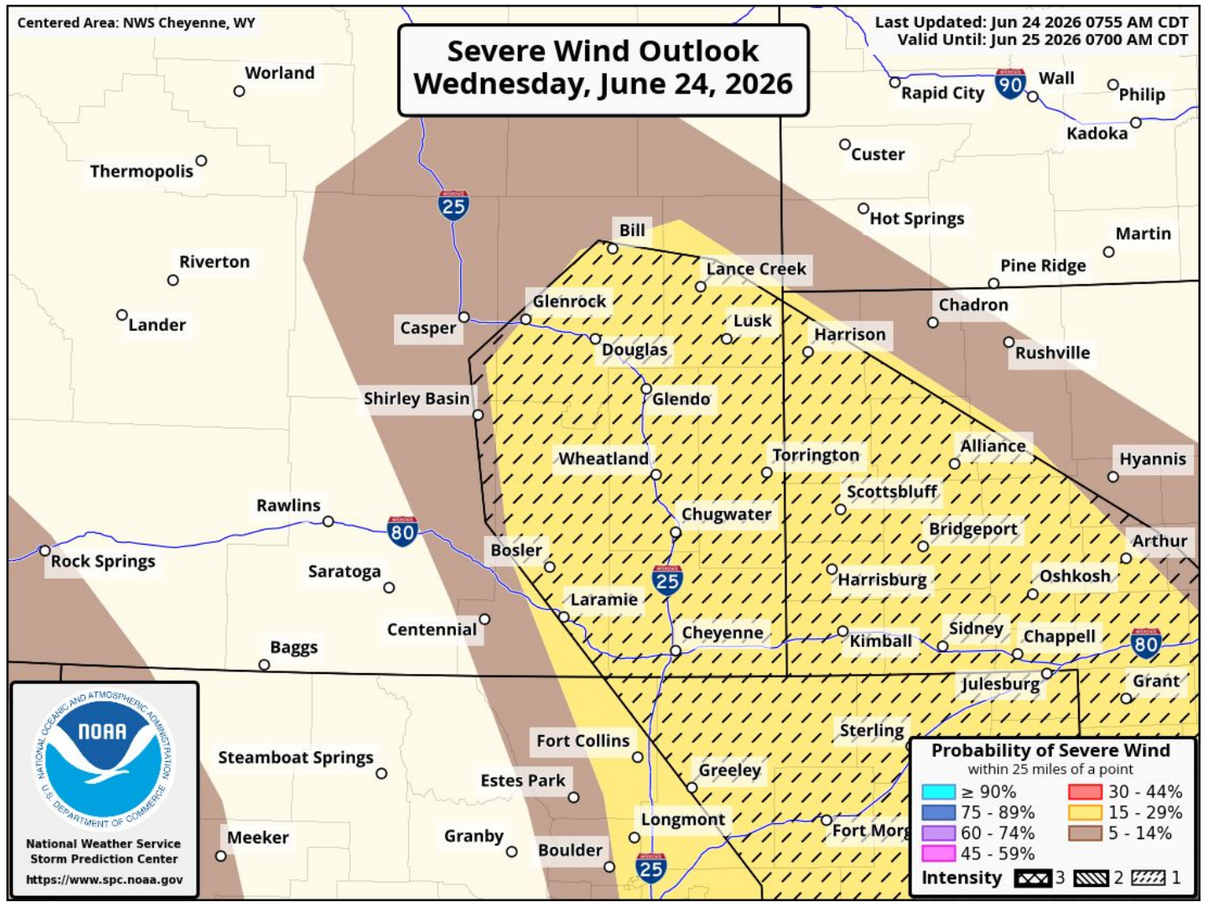

➔ **Isolated very large hail anticipated today**. Hail in excess of **3 inches in diameter** possible in the solid hatched area.

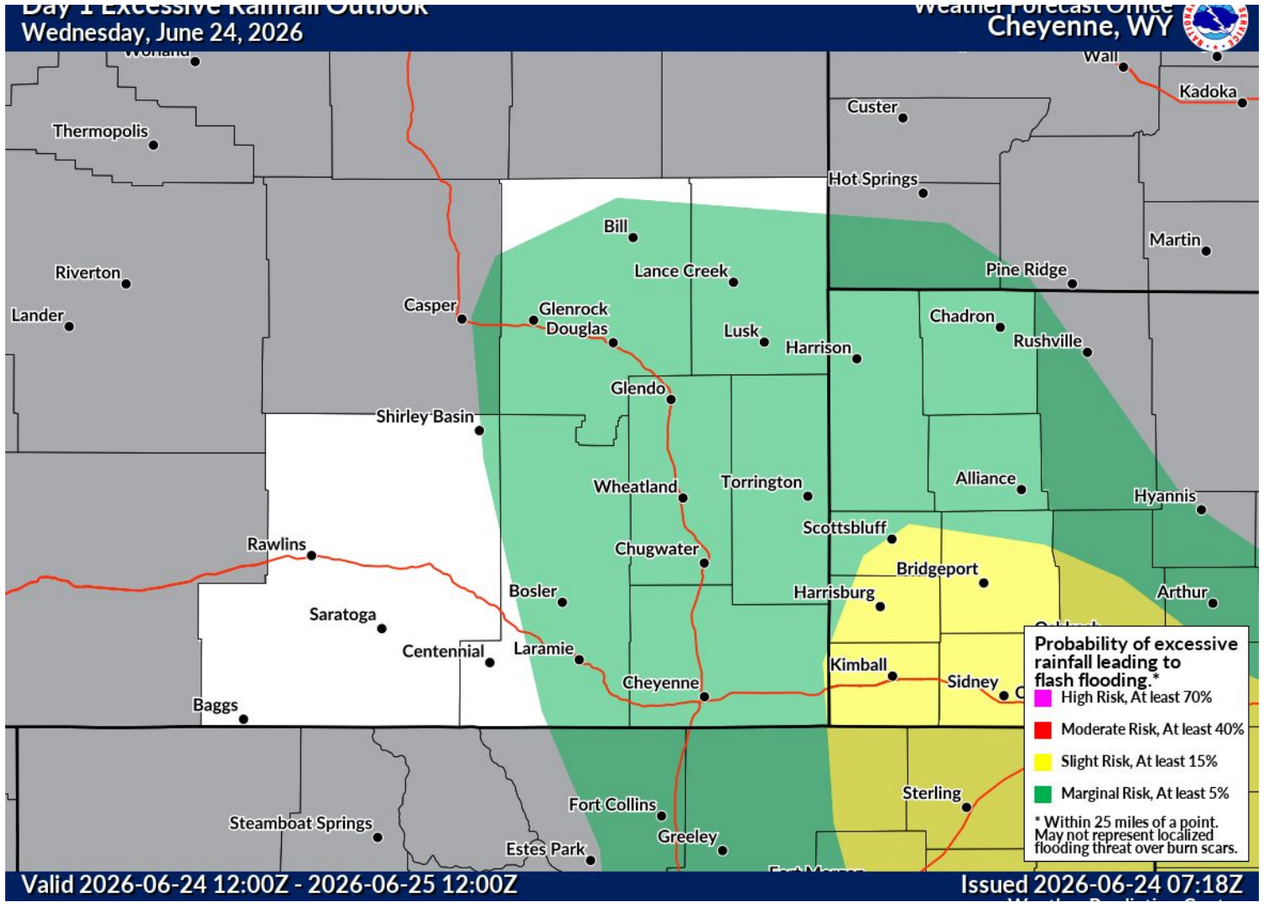

➔ Highest probabilities for largest hail is along the I-25 & I-80 corridor.

Wind & Flash Flood Risk

June 24, 2026
8:41 AM

This Afternoon and Evening

- ➔ Strong winds exceeding 65 mph possible across the entire area with today's thunderstorms.
- ➔ Isolated wind gusts exceeding 75 mph are possible, particularly in the hatched area.

- ➔ Locally heavy rainfall and training storms may produce widely scattered flash flooding across the area.
- ➔ Recent burn scars (e.g. South Fork Fire area) will be particularly sensitive to flooding.
